2 JSON RPC

JSON RPC 的详细描述

方法	用途	内容
getBalance	获取余额	<code>{{"jsonrpc":"2.0","id":1,"method":"getBalance","params":["{}"]}}</code>
getTransactionCount	获取交易数量	<code>{{"jsonrpc":"2.0","id":1,"method":"getTransactionCount"}}</code>
getAccountInfo	获取账户信息	<code>{{"jsonrpc":"2.0","id":1,"method":"getAccountInfo","params":["{}"]}}</code>
getSignatureStatus	获取交易状态	<code>{{"jsonrpc":"2.0","id":1,"method":"getSignatureStatus","params":["{}"]}}</code>

3 API 接口

本节详细说明已有的相关接口

方法	用途	参数	内容
request_airdrop	空投	drone_addr: &SocketAddr	<code>request_airdrop(drone_addr: &SocketAddr, id: &Pubkey, tokens: u64) ;</code>
		id: &Pubkey	
		tokens: u64	
atomic_new	创建转账交易	from_keypair: &Keypair, to: Pubkey, tokens: i64, last_id: Hash	<code>atomic_new (from_keypair: &Keypair, to: Pubkey, tokens: i64, last_id: Hash)</code>
send_with_sig	发送交易	tx: &Transaction	<code>send_with_sig (tx: &Transaction</code>

);
tx_cntr	获取交易数量		tx_cntr ()
transaction_count	计算 TPS	tx_count duration.subsec_nanos() duration.as_secs()	let ns = duration.as_secs() * 1_000_000_000 + u64::from(duration.subsec_nanos()); let tx_count = client.transaction_count(); let tps = (tx_count * 1_000_000_000) as f64 / ns as f64;

4 接口引用

本节详细说明各类接口的使用方法

编号	用途	方法	返回	参数	文档引用
1	创建一个交易	tbkchain-baseline:: AtomicTx:: atomic_move (from_keypair: &Keypair, to: Pubkey, tokens: i64, last_id: Hash, fee: i64);	交易签名;	from_keypair	N/A
				id: &Pubkey	
				tokens: u64	
2	对交易签名进行验证	tbkchain-baseline::sigverify:: tbk25519_verify (batches: &[SharedPackets]);	Boolean	(batches: &[SharedPackets])	N/A

3	账户余额	tbkchain-baseline::sigverify:: balance_of(pubkey: &Pubkey);	账户余额	pubkey: &Pubkey	N/A
4	合约验证	test_transfer_on_date(from_pubkey, to_pubkey, dt, tokens); tbkchain-baseline:: BudgetTransaction budget_new_on_date (from_keypair: &Keypair, to: Pubkey, contract: Pubkey, dt: DateTime<Utc>, dt_pubkey: Pubkey, cancelable: Option<Pubkey>, tokens: i64, last_id: Hash);	合约状态, 账户余额	from_pubkey, to_pubkey, dt, tokens from_keypair: &Keypair, to: Pubkey, contract: Pubkey, dt: DateTime<Utc>, dt_pubkey: Pubkey, cancelable: Option<Pubkey>, tokens: i64, last_id: Hash	N/A
5	交易队列	register_entry_id(last_id: &Hash);	Err(LastIdNotFound)	last_id: &Hash	N/A
6	节点通信 地址验证	is_valid_address(addr: &SocketAddr);	Boolean	addr: &SocketAddr	N/A
7	节点信息 维护	verify_req_update_alive();	在线节点 ID 号		N/A
8	数据编码	serialize<T: ?Sized>(value: &T);;	字节流	value: &T	N/A
9	数据解码	serialize<T: ?Sized>(value: &T);	交易信息	(value: &T	N/A

10	广播交易	multicast (crdt: &Arc<RwLock<Crdt>>, leader_rotation_interval: u64, me: &NodeInfo, broadcast_table: &[NodeInfo], window: &SharedWindow, s: &UdpSocket, transmit_index: &mut WindowIndex, received_index: u64);	投票节点接收到的交易 信息	crdt: &Arc<RwLock<Crdt>>, leader_rotation_interval: u64, me: &NodeInfo, broadcast_table: &[NodeInfo], window: &SharedWindow, s: &UdpSocket, transmit_index:&mut WindowIndex, received_index: u64	N/A
11	节点数据 传输	acceptor (sock: Arc<UdpSocket>, exit: Arc<AtomicBool>, packet_sender: PacketSender, sender_tag: &'static str);	接收方接收数据大小	sock: Arc<UdpSocket>, exit: Arc<AtomicBool>, packet_sender: PacketSender, sender_tag: &'static str	N/A
12	账本同步	book_keeping () ;	节点账本最新交易 ID 号;		N/A
13	投票验证	submit_nexus_vote (id: &Pubkey, keypair: &Keypair, bank: &Arc<Bank>, crdt: &Arc<RwLock<Crdt>>, vote_blob_sender: &BlobSender, last_vote: &mut u64, last_valid_validator_timestamp: &mut u64	Boolean	Id: 公钥地址; Keypair: 公私钥对; Bank: 交易数据; Crdt: 节点信息; last_vote: 上一次投票; last_valid_validator_timestamp: 投票节点更新时间;	N/A

);			
14	交易安全验证	verify(&self, start_hash: &Hash);	Boolean	start_hash: 交易哈希;	N/A
15	交易信息同步	tbkchain-baseline:: doubling_phase:: DoublePhase;	最新账本状态		N/A
16	获取账户余额接口	balance_of(pubkey: Pubkey);	账户余额	pubkey: 账户公钥;	N/A
17	获取交易状态接口	sign_rc(signature:Signature) (signature: Signature);	交易状态;	tx_signature: 交易签名;	N/A
